SUMMARY

Frontend-focused software engineer working in TypeScript, React, Next.js, and Python. Promoted to Senior Software Engineering Associate at DigitalNEST within a year; lead 3 engineers and serve as primary client contact on two concurrent projects. Delivered a solo WCAG 2.2 AA upgrade that raised a site-wide external audit score from about 65 to 90.

EXPERIENCE

DigitalNEST (nonprofit) Sept 2025 - Present
Senior Software Engineering Associate, Stockton, CA *Aug 2026 - Present*
Software Engineer, Modesto, CA *Sept 2025 - Aug 2026*

- Lead a team of 3 engineers and serve as primary client contact on two concurrent client projects, owning each from requirements and scoping through delivery, working with DigitalNEST's designers
- Built the depth-camera tracking pipeline and gesture recognition for Sound Canvas, an interactive exhibit installed and running at the Modesto Children's Museum (8-person team): Orbbec Femto Mega over ethernet, real-time motion data streamed via OSC into TouchDesigner; iterated through feedback rounds with museum staff
- Built most of the landing page and the About page for Seledon (Vite, React); took over as project lead with the promotion and am integrating Google Apps Script so the client can edit the main-page chart's data from a Google Sheet
- Owned accessibility and SEO work on two client sites, Seledon and Brown Issues (brownissuestv.org), bringing Lighthouse Accessibility and SEO scores to 85-90+
- Researched and evaluated AI development tooling, driving team adoption of Cursor, Claude Code, and Google Antigravity

Trinchero Family Estates June 2024 - Dec 2024
Software Engineer, Napa, CA (Hybrid)

- Delivered a solo WCAG 2.2 AA upgrade on a seven-figure WordPress/PHP/JS e-commerce site: site-wide external audit score about 65 to 90, Lighthouse Accessibility about 72 to 97; contributed to a team-reported 10% conversion lift
- Raised Lighthouse SEO from about 65 to 95 through alt text and image optimization, meta tags, and heading structure
- Refactored legacy WordPress, PHP, and JavaScript in the ordering and checkout flows

PROJECTS

CVYG Check-In | *Next.js 16, TypeScript, PostgreSQL, Prisma, Vitest, Recharts, Vercel* Apr 2026 - Present
cvygcheck.vercel.app | github.com/AidanYounathan/cvygcheck

- Built solo after youth members received conference credit for attendance they didn't have; deployed across two parishes for a youth community of about 200
- Server-enforced check-in controls: single-use QR tokens that expire after two minutes, GPS geofencing, and a limit of one check-in per device per day keyed on FingerprintJS device IDs
- Admin dashboard (Recharts: arrivals by hour, by parish, all-time) and a no-code form builder so organizers add fields without code changes; Vitest unit tests on token and geofence logic

SoundReel | *Python, FastAPI, aiosqlite, React Native, Expo, TypeScript, Zustand* Mar 2026 - May 2026

- Personal project: async FastAPI backend that offloads the blocking download to a worker thread with asyncio.to_thread and serves audio through FileResponse, which handles HTTP Range requests so playback can seek
- Typed React Native (Expo) client with Zustand state for tracks, repeat mode, and download status; background playback and remote media controls via react-native-track-player; four screens on React Navigation

SKILLS

Languages & Frameworks: TypeScript, JavaScript, Python, SQL, PHP, React, Next.js, Vite, FastAPI, React Native (Expo), Prisma
Data, Infrastructure & Practices: PostgreSQL, Cloudflare Workers and D1, Vercel, WCAG 2.2 AA, ARIA, SEO, Vitest

EDUCATION & TRAINING

CodeStack Academy | Certified Software Engineer, Congressional Recognition (Sept 2023 - Sept 2024). Year-long software engineering program, 1,100+ hours; built 8 solo web applications.
